

CTI: Integrated Project Management Support Services – Infrastructure (IPMSS-I)

Client: Denver International Airport (DEN)

Location: Denver, CO

Project Budget: \$30 million

CTI Role: Prime contractor – Program and project management across runways, taxiways, roads, utilities, and industrial facilities (design, procurement, construction management, QA/QC, safety, stakeholder management).

IPMSS-I is a comprehensive on-call contract supporting DEN's airside and landside infrastructure program. CTI provides full program management services spanning design oversight, procurement support, construction management, quality assurance, safety coordination, and stakeholder management across dozens of concurrent projects.

Key Outcomes

- Standardized project management and QA/QC documentation improving consistency and efficiency across all infrastructure projects
- Enhanced cross-division coordination between DEN's Infrastructure, Operations, Maintenance, and Aviation departments
- Proactive risk management and issue resolution maintaining schedule and budget performance
- Seamless task order administration through established protocols and system integration

Summary

Through the IPMSS-I program, CTI has demonstrated its ability to manage complex infrastructure initiatives involving multiple concurrent projects, diverse stakeholders, and evolving operational requirements. Our role has required disciplined program management, effective coordination across multiple departments, and the consistent application of project controls, quality assurance, and risk management practices. This experience reflects CTI's capacity to successfully lead large-scale infrastructure programs while maintaining strong collaboration with clients, contractors, and project partners to ensure reliable and efficient project delivery.
